Advocord Expands Platform to Serve Professional Guardians

Case management tools purpose-built for professionals now available

Chambersburg, PA — July 2026 — Advocord, the secure online platform trusted by family guardians to manage the life and details of adult dependents, today announced the launch of its professional guardian edition — bringing the same compassionate, human-centered approach to professionals managing multiple wards.

The expansion comes in direct response to feedback from the guardianship community. Professional guardians face a distinct set of demands: managing dynamic caseloads, logging billable hours, tracking reimbursable expenses, and meeting rigorous court reporting requirements — often simultaneously, across many individuals. Until now, no purpose-built tool existed to meet those needs in one place.

“The work of professional guardianship is deeply human,” said Nancy Meyers, founder of Advocord. “These professionals carry an enormous responsibility on behalf of people who can’t advocate for themselves. They deserved tools as dedicated as they are.”

What’s New

The professional edition introduces a unified multi-dependent dashboard under a single login, billable hours logging, reimbursable expense tracking, expanded reporting and export capabilities, greater workflow customization, unlimited view-only invites for collaborators, and broad performance improvements throughout the platform.

Pricing

The new edition is priced at \$15 per dependent per month. Because caseloads shift — dependents are added, cases close, circumstances change — billing adjusts each month to reflect only active dependents. Guardians are never locked in and never overpaying for a caseload that no longer reflects their work.

About Advocord

Advocord is a secure subscription platform designed for anyone managing the life and details of an adult dependent — accessible on mobile or desktop. Already serving dedicated family guardians, Advocord will now also serve professional guardians managing dynamic caseloads with the same flexibility, security, and care the platform is known for.
